

# Shop under attack

Krsmanovich Marko

Kasimov Ilya

Condition

---

Two cases

- $1x1 * 2 \leq 1x2$  – obviously
- $1x1 * 2 \leq 1x2$  – needed to be investigated

Solution

---

# Complexity

- $O(E|f|)$  – complexity of Ford-Fulkerson  
( $E$  – num of edges,  $|f|$  - abs.value of flow)
- $|f| \leq (\text{Damaged products}) / 2$
- $E \leq (\text{Damaged products}) * 4$
- So  $O((\text{Damaged products})^2)$
